Now that is what I call a rock fall.

Bill,

I was able to confirm that both of the photos were the same rockfall and it occurred on Nov 11, 1947. Here are the scans from the study collection with a few additional photos.

Dave

Dave,

A reviewer for the ZNP geologic hazard report has asked if I know the date (nearest year or even decade would be acceptable) that the attached photo was taken. The caption for the black and white photo of the dump truck crushed by the boulder that you also sent me is dated 1946, but there is no date on the hole-in-the-roof photo. Any idea when?

Bill
