26M

SUBJECT: I-15-5(11)213 - Mills Jct. to South Nephi;  
I-15 over "K" Line at I-15 & Sta. 661+00

SOL

135

## SITE CONDITIONS

Two single span prestressed concrete beam structures are proposed to carry I-15 over "K" Line frontage road and channel "K". Each of the proposed structures will be approximately 90 feet long by 44 feet wide and will cross "K" Line at right angles. The approach embankments will be approximately 18 feet to 21 feet high.

Surface drainage in the area is good.

## SUBSURFACE EXPLORATION

Four test holes were drilled at the site of the proposed structures. The holes ranged from 60 feet to 70 feet deep and correlation of the subsurface materials encountered is good. In general, these materials may be described as follows: From the ground surface to a depth of 16 feet - very stiff clayey silt with some layers of medium silty sand; from 16 feet to 30 feet - dense to very dense silty sand and gravel with some cobbles and hard clayey silt; from 30 feet to 44 feet - layers of medium to hard clayey silt and dense to very dense silty sand with varying amounts of gravel; from 44 feet to the maximum depth of exploration - very dense silty sand and gravel with cobbles and boulders and some hard clayey silt. Detailed descriptions of sediments and test hole locations are given in the attached Drilling Log (Fig. 1).

## FOUNDATION RECOMMENDATIONS

Steel pipe piles or tapered steel piles are recommended for support of the abutments on these structures. One foot diameter steel pipe piles or tapered steel pipe piles with a minimum 8 inch diameter tip driven 6 to 12 feet into the dense to very dense silty sand and gravel may be loaded to 120 kips per pile. The estimated pile tip elevations are 5091 feet for the N.B.L. and 5089 feet for the S.B.L. The corresponding depth below the natural ground surface is 25 feet. Estimated pile tip elevations are only approximate and shall be verified at the time of construction. Pile settlement is not expected to exceed 1.0 inch.

**KEY TO DRILLING LOG**

**RELATIVE DENSITY NON-PLASTIC**

VERY LOOSE - LESS THAN 4 BLOWS  
LOOSE - 4 TO 10 BLOWS PER FOOT  
MEDIUM - 10 TO 30 BLOWS PER FOOT  
DENSE - 30 TO 50 BLOWS PER FOOT  
VERY DENSE - MORE THAN 50 BLOWS

**CONSISTENCY (PLASTIC-SILT & CLAY)**

VERY SOFT - LESS THAN 2 BLOWS  
SOFT - 2 TO 4 BLOWS PER FOOT  
MEDIUM - 4 TO 8 BLOWS PER FOOT  
STIFF - 8 TO 15 BLOWS PER FOOT  
VERY STIFF 15 TO 30 BLOWS PER FOOT  
HARD - MORE THAN 30 BLOWS PER FOOT
